

ICU NURSING CARE WORKSTATION

Maximize the space for patients

Minimize the space for devices

State 1 Patient transport

In the case of transferring patient, the infusion pump frame is designed with flexible and movable rotating structure, which allows enough space for the transfer of patients.

State 2 Medical care operations

In the medical care working environment, the infusion pump frame can be moved from head to toe along the side of the bed to the required position, providing accurate treatment for patients, especially for the treatment of burn and neurosurgery patients.

State 3 Rescue operation

In the working environment of medical rescue and treatment, the three-dimensional space design provides the unhindered space which guarantee the the maximum extent for the bedside clinical treatment operation.
